

IN THE CLAIMS:

Please cancel claims 1-7 without prejudice to or disclaimer of the subject matter recited therein.

Please add new claims 8-13 as follows:

LISTING OF CURRENT CLAIMS

1-7. (Canceled)

8. (New) A gun type main game machine for use with a display device comprising:

5 a) at least one light gun having:

 i) a plurality of operating buttons located on an exterior of the at least one light gun;

 ii) a power switch located on the exterior of the at least one light gun;

 iii) a trigger; and

 iv) image, sound, and power lines extending therefrom, the image line and the sound line being connected to an image socket and a sound socket, respectively, of the display device and the power line being connected to a transformer that is connected to a power supply; and

10 b) an electric circuit board having:

15 i) a single chip microprocessor located on the circuit board;

 ii) a microswitch controlled by the trigger located on the circuit board;

 iii) a plurality of light emitting diodes located on the circuit board; and

20

- iv) a photoelectric diode located on the circuit board and electrically connected to the microswitch, wherein the photoelectric diode is controlled by the trigger to produce an externally projected light beam.

9. (New) The gun type main game machine according to claim 8, wherein the at least one light gun includes a battery set for supplying electric power.

10. (New) The gun type main game machine according to claim 8, wherein the at least one light gun has an extension groove containing a connecting means.

11. (New) The gun type main game machine according to claim 8, wherein the trigger includes a trigger end and a moving end, the moving end of the trigger is connected to the microswitch, wherein the microswitch is controlled by the moving end during operation of the trigger end.

12. (New) The gun type main game machine according to claim 8, further comprising a light guiding shade and a lens, the photoelectric diode is located on a front of the electric circuit board, and the light guiding shade located between the photoelectric diode and the lens.

13. (New) The gun type main game machine according to claim 8, wherein the at least one light gun includes a first light gun and a second light gun, and further comprises an extension line electrically connected at a first end thereof to the first light gun and at a second end thereof to the second light gun.
